DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Stam et al. (US Pub. 2003/0123706).

Re claim 1, Stam discloses a vehicular lamp used for a vehicle (i.e., control system for vehicle head light), comprising:

a semiconductor light emitting element (i.e., LEDs 2600, 2700, 2800) for generating light used for the vehicular lamp (i.e., control system for vehicle head light) (Figs. 11, 20, 26-28; paragraphs [0124], [0260], [0265], [0270]-[0273]); and

a current controlling unit (i.e., microcontroller 1105) for changing a current (i.e., voltage) supplied to the semiconductor light emitting element (i.e., LEDs 2600, 2700, 2800) based on brightness around the vehicle (Figs 11, 20, 26-28; paragraphs [0124], [0129], [0135], [0187], [0228], [0242], [0272]).

Art Unit: 2821

Re claim 2, Stam further discloses the current controlling unit (i.e., microcontroller 1105) reduces the current (i.e., voltage), if the brightness around the vehicle is higher than a predetermined level (Fig. 20; paragraphs [0081], [0082], [0129], [0179], [0180], [0183]).

Re claim 3, Stam further discloses the current controlling unit (i.e., microcontroller 1105) reduces the current (i.e., voltage), if the vehicle is stopped (paragraphs [0124], [0176]).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tanabe et al. (US 6,443,602); and Stam et al. (US 6,255,639); teach similar inventive subject matter.
